The NHGRI-EBI GWAS Catalog, a curated resource of SNP-trait associations

Joannella Morales [1]

DNA & RNA

Beginner

0.5 hour

The GWAS Catalog is a manually curated summary resource of human genotype-phenotype associations from GWAS publications. The Catalog contains a vast amount of data, encompassing over 38,000 SNP-trait associations from more than 2,800 publications as of May 2017. This data is used by a growing community of biologists and bioinformaticians to identify causal variants, understand disease mechanisms and establish targets for treatment.

This webinar will provide a background to genome-wide association study design and will introduce users to the GWAS Catalog. Topics such as Catalog content, data availability and access, search capability, and interoperability [2] with other resources will be discussed.

This webinar took place on 28th June 2017. It is best viewed in full screen mode using Google Chrome. The slides from this webinar can be downloaded below.

See the EMBL-EBI training pages for a list of upcoming webinars [3].

This webinar is aimed at individuals who wish to learn more about the GWAS catalog. No prior knowledge of bioinformatics is required, but an undergraduate level understanding of biology would be useful.

Learning objectives:

- Describe key features of GWAS studies
- Search the GWAS Catalog
- List features of the GWAS Catalog tables
- Access data using the GWAS Catalog diagram

Your feedback

Please tell us what you thought about this webinar. Your feedback is invaluable and helps us to improve our courses and thus enhance your learning experience.
